# Hereditary Clotting Factor Deficiencies (Bleeding Disorders)

## Children's Special Health Parent's Sheet

#### **Description**

Hemophilia A (Factor VIII deficiency) and Hemophilia B (Factor IX deficiency) are the most
common severe inherited coagulation factor deficiencies. Their symptoms are virtually
identical; clot formation is delayed thus allowing continued bleeding. Hemophilia C refers to
the bleeding disorder associated with reduced levels of Factor XI and the bleeding is more
moderate than A and B. von Willebrand Disease is a common hereditary bleeding disorder.

### What services will CSH cover?

- Only **providers** listed on the Eligibility Letter will be paid
